

# SNOWGE COIN

A SNOWYPAPER/FLOOFYPAPER

## INTRODUCTION

SnowgeCoin was created as a deflationary meme currency on the BSC network, and began as a **fork of the SafeMoon<sup>1</sup> project**, following in the footsteps and naming conventions of other meme currencies like DogeCoin and Hoge.finance<sup>2</sup>.

SnowgeCoin has been designed with a unique feature in mind – **randomized transaction fees**. Whenever a user performs a transaction using SnowgeCoin, Snowge McFloofy the Samoyed takes a bite out of it as a delicious fee, depending on how hungry he is!

Fees are charged based on the current block number, and will end up being either **2%**, **4%**, **6%**, or **8%** of the total transaction value. Half of the transaction fee will be added to the BNB/SnowgeCoin liquidity pool on PancakeSwap, further increasing the value of existing tokens, and the other half of the transaction fee will be **redistributed to SnowgeCoin holders**.

These mechanics allow SnowgeCoin to act as a deflationary autostaking currency, where the number of tokens in holder's wallets and their theoretical value will increase after every transaction. It encourages holding Snowge, as the amount of Snowge you own will automatically grow over time. So remember – snowges are for snuggling, not for selling!

In order to have the best chance of buying SnowgeCoin, **set the AMM slippage value to 9%** – or try sneaking past our Samoyed guard dog. Good luck, and happy floofing!

## LAUNCH DETAILS

**One billion tokens were minted as an initial supply**, and the token will be launched by adding initial liquidity to PancakeSwap that will immediately be burned. A pre-sale will be active on DxSale, and will be advertised on both Discord and Twitter for launch in order to provide launch liquidity.

The initial pre-sale offering will be for purchases of **1,000,000 SNOWGE tokens for 0.1 BNB** apiece (no more, no less) as the presale price, capped to one wallet address per purchase at a max of 500 buyers, for a total of **500 million SNOWGE**. SnowgeCoin's special tokenomics will be disabled for the presale, so that buyers are able to receive their full million tokens instead of 92%-98%.

Once the presale has been completed and SNOWGE tokens are distributed, (either by reaching **500 holders or after 24 hours**, whichever comes first), the **475 million** remaining SNOWGE tokens will be automatically added to PancakeSwap with all of the BNB available as initial liquidity. Developers and team members have no reserved tokens or liquidity available, as the initial liquidity is locked for 5 years via DxSale and the **remaining 15 million tokens from the developer address have been burned**. They will also not receive any part of the pre-sale proceeds – they will have to participate in the **pre-sale and fair launch** of the token if they wish to acquire SnowgeCoin.
